## WAREHOUSE SAFETY & I.D. SYSTEMS

We offer a single source for warehouse safety products and identification systems. Our extensive range includes:

### Location Labels

A comprehensive range of quality location labels to cover a variety of applications including pallet racking and shelving, quickly and efficiently manufactured and installed.

### Load Notices

A fundamental part of health and safety – we have developed an automated load notice website for quick and accurate load notice production – full colour, including photographs and graphics, are now available.

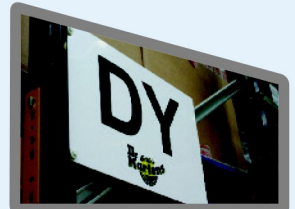

### RackNets™ Back-of-Rack & In-Flue Safety Netting

Technically designed and thoroughly tested, our RackNets™ systems offer a safer, more robust and cost-saving alternative to steel mesh. Specifically designed to prevent injury to personnel and damage to stock by preventing fall-out and fall-through from APR.

### Aisle Markers

An ideal way to identify rack and shelf ends, our range of aisle markers are custom made, quick to install and available in a wide range of colours and sizes.

### Column Protection

Column protectors and guards protect the MHE as well as the column; without these, the cost of repair to damaged forklifts can be very expensive.

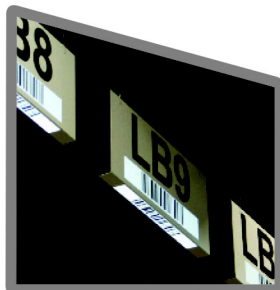

### Steel Partitioning Systems

Our steel mesh partitioning modular solutions bring new levels of safety and security to the workplace. Designed to control access to storage and other areas and to separate working areas and protect personnel.

### Hanging Signs

Enabling users to identify locations quickly and clearly from a distance, hanging signs provide a neat solution to block stack requirements. Available in standard and bespoke sizes to suit any application. Suitable for long range scanning.

### Safety Signage

Safety signs are a legal health and safety requirement within the working environment. We stock a huge range of safety signs as well as offering a bespoke design service.

### Block-Stack Labelling

Block-stack storage environments require more durable identification systems due to their often harsh environments. Our solutions are varied in practicality to suit individual requirements.

### Armco Barriers

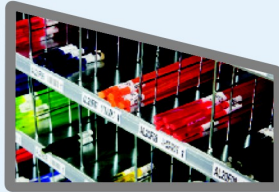

Armco crash barriers provide very durable protection in busy warehouses, yards and general outside areas. Selected for their stopping power and universal applications, armco traffic barriers lead the way.

## Label Holders

We stock the widest range of holder heights in the UK, from 17mm to 105mm. Available in self-adhesive and magnetic. Most sizes available for immediate delivery.

## Rack Protection

The results of even a very minor collision with racking uprights can be catastrophic. Rack protectors will add an extra level of protection to help prevent damage to racking uprights.

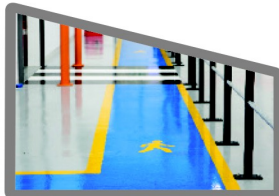

## Machine Guarding

Our machine guarding and safety systems are tailored exactly for you. All safety equipment is designed and manufactured to Machinery Directive 2006/42/CE.

## Internal Lines & Walkways

Our line marking solutions are both durable and professional in appearance compared with other solutions available.

## Hand Rails & Barriers

Hand rails are crucial for ensuring the safety of staff within busy working environments. Barriers protect people, buildings and equipment. Being highly visual, they also signal to MHE drivers to be extra vigilant in these areas.

## Mezzanine Hand Rail Netting

An efficient method of improving employee safety, mezzanine hand rail netting creates a barrier between the edge of the mezzanine and the ground below, subsequently preventing any stock falling between the railings and potentially injuring employees.

## Exterior Line Marking

Our exterior line marking service offers excellent value for money, efficient service and sound advice – working closely with our customers throughout the process to deliver the correct solution.
